

Moulds in polycarbonate for chocolate

Innovation, Technology and Creativity

Catalogue n.23-2023

*For nearly 60 years we have manufactured moulds in polycarbonate for chocolate.
Today we continue to study, create and innovate with the same passion as we started.*

Experience, innovation and Made in Italy

Everything is done in Italy, from design to realization, respecting the quality standards, creativity and manufacturing experience that have always distinguished us.

Our company as always put the needs of its customers first, that's the reason why every year we invest in technological development, and new equipment.

New injection press machine

In May 2020 CABRELLON SRL made another step on production process widening its machine park and by welcoming the NPM2000.

This injection press is dedicated to large scale productions, especially for big industrial moulds. This new arrival has allowed us to increase flexibility and significantly reduce the molding time.

New Milling Machine

In September 2021 we upgraded our tooling department by purchasing a new CNC station, the TS10 PLUS, increasing our already equipped range of machinery.

This new workstation has a range of work that allow us to rapidly develop the tooling for every plant, even the bigger ones, with ultra-high precision.

Social responsibility regarding the environment

To prevent and minimize environmental impacts, our company pursued a training and information program which involved also its employees.

In addition, Cabrellon is engaged in the production of its own energy needs through the installation of solar panels which have been placed on a surface of 8500 m².

At the moment we reach a daily production of around 2500 KW.
